

EVERYONE IS
A MASTERPIECE

THE STANDARDS OF BEAUTY HAVE CHANGED
AND WE ARE READY TO REDEFINE THEM.

Introducing our *new* super skin booster PROPHILO®

Profhilo is creating a real buzz in the aesthetic world, with many practitioners referring to it “as something they have been waiting for” or as “the most exciting development in injectable treatments in a long time”

“It’s like the holy grail of skincare. It’s better than looking well rested. The result is a dewy, healthy, slightly plumper looking glow that takes a good five years off your face.”

Imogen Edwards Jones

What is Profhilo®?

A skin laxity treatment, Profhilo® uses patented technologies engineered for ‘skin remodelling and boosting’, a revolutionary concept of ‘curling’ wrinkles rather than ‘filling’ them.

It uses a unique concentration of Hyaluronic Acid, which penetrates deeply through the skin to accelerate the production of collagen and elastin, creating plumper more hydrated skin. Profhilo® works across the entire face rather than focusing on one area, and is therefore fantastic for those looking to smooth fine lines and wrinkles, and achieve an overall more youthful appearance.

Profhilo is made of hyaluronic acid gel, like other fillers that are used to replace lost volume, except that it is much runnier and, unlike other fillers, it doesn’t change the shape of your face.

Hyaluronic acid is a naturally occurring substance that’s found in our bodies and frequently used in moisturising serums because it attracts water molecules. Unlike creams, the hyaluronic acid in Profhilo has been ‘cross-linked’ intensifying the bonds between the molecules so that it stays in the skin for longer.

And unlike other fillers that are injected deep into the face Profhilo is injected into the superficial layers of the skin where it spreads out to do its magic.

How does Profhilo work?

As a stabilised product Profhilo lasts in the skin around 28 days. During this time the stimulation of 4 different types of collagen and elastin takes place by slow release of HA.

In the short term, the Profhilo gel spreads out in the superficial layer of your skin, encouraging hydration, but the really good news is that clinical tests show that it also improves elasticity and collagen production, in a process called ‘biostimulation’ which results in significant tissue improvement and delivers great results as a skin boosting treatment on its own or in combination with other aesthetics treatments currently on offer.

This characteristic of Profhilo® makes it an ideal treatment for improving elasticity and tightening areas such as the neck, around the mouth and hands without giving an artificially enhanced appearance.

What does the treatment involve?

Profhilo is an injectable treatment administered subcutaneously. You need two sessions, with a four-week gap for optimum results.

There’s no need for anaesthetic as the injections are so superficial. Then it’s just five quick jabs on either side of your face and if you chose to have your neck treated, about 10 more in your neck.

Your skin will feel smoother from the first week after the treatment. But we treat again a month later and that’s when you begin to see the real benefits. That’s because it stays in the skin for thirty days, but if it is in the skin for sixty days, you get a long-lasting response in the skin. It stimulates new collagen, which is a protein in the skin, and new elastin. So the plumpness, firmness and springiness improve and that can last up to six months post treatment.

How quickly can you see results

Results appear usually after about four weeks and increase over time with new collagen and elastin forming. The effects are long-lasting. They typically last around 6 months and the feedback from our patients to date has been fantastic.

For the best results two treatments of 2ml are recommended, 4 weeks apart. Maintenance treatments can be scheduled according to your body's response to treatment, usually every 6 months afterwards.

Hayley sums up the effect perfectly when she says Profhilo affects the 'blink impact', that first impression you get of someone when they first walk in the room.

'Most people see results within a month', says Hayley 'but some of our patients noticed a difference in their skin within a couple of weeks. The skin looked more plumped and youthful. Nothing dramatic, but at the same time very noticeable.

The biggest change comes after the second treatment.

And that's when people really start to notice. What have you done? Your skin is glowing.

There's only one snag of course...Once you have had it you are officially hooked'

And, when it comes to potential side-effects and risks?

Profhilo®, a multi award winning product, was launched in February 2015 in Italy. It's been used worldwide ever since. Over 150,000 patients have been treated so far with no adverse reactions reported.

It's no wonder everybody loves it.
